

MAHENDRA'S ONLINE DIGITAL FINDINGS

Comprehensive Website Redesign & Complete Digital Marketing Plan

Project Overview & Brand Strengths

Offline Authority Market Position

- Over 150 physical coaching institutes across tier-1, tier-2, and tier-3 towns in India.
- Lakhs of competitive government exam aspirants deeply trust the brand legacy.
- Highly comprehensive study materials and traditional test series resources are already built.

The Digital Scaling Imperative

- While the offline business is successful, the current web application layout requires a design upgrade.
- Competitors are capturing online market share using modern user interaction frameworks.
- Objective: Move the official website from an informational bulletin format to an active sales platform.

Website Audit: Key Area Analysis

1. Front Page Layout Confusion

The home screen layout suffers from heavy cognitive load. Moving news tickers, crowded banner graphics, and multiple unorganized sidebars make it difficult for students to find core details quickly.

2. Navigation Menu Fatigue

The desktop primary navigation menu lists 17 standalone links with identical structural hierarchy. This extensive option set results in instant choice paralysis and early user drop-offs.

3. Mobile Experience Limitations

Over 80% of regional students learn exclusively on cellular viewports. The current web architecture forces dense grids onto mobile layouts, causing slow speeds and tiny tap targets.

Website Audit: The Organic Content Disconnect

High-Performing Search Entry Points

- Daily informational resource pages like Current Affairs blogs secure exceptional organic traffic via Google search.
- Thousands of prospective aspirants visit these articles every single day to look at syllabus details and notifications.

The Traffic Commercialization Gap

- Content pages operate as linear dead ends. Visitors read the material and leave the platform immediately.
- There are no dynamic sidebar banners or floating panels matching the course products to the specific topics being read.
- Free updates are distributed effectively, but the system captures no active admissions or commercial sales from them.

UI/UX Redesign: The Streamlined 3-Hub Model

1. The Learning Hub

Consolidates all live video lecture schedules, upcoming batch dates, and paid course catalogs. Features an instant, form-free demo class preview layout to let students try materials before registration.

2. The Practice Hub

Hosts the entire digital testing suite including premium mock exams, daily concept quizzes, and timed test packages. Connects directly to an advanced dashboard monitoring performance scores visually.

3. The Update Hub

Serves as the absolute center for official government recruitment news timelines, syllabus summaries, and eligibility calculators. Acts as the primary lead generation engine.

Interface Evolution: Core Component Upgrades

Primary Screen First Fold

- Historical Architecture: Crowded moving headline rows layered over low-resolution promotional imagery panels.
- Redesigned Architecture: Minimalist presentation focused entirely on a large, central program exploration search query box.

Course Discovery Modules

- Historical Architecture: Plain paragraph listings requiring multi-field login steps just to inspect baseline schedules.
- Redesigned Architecture: Highly structured course presentation blocks tracking price figures, durations, and demo paths.

Practice Feedback Assessment

- Historical Architecture: Rigid tables providing total correct answers along with static document answersheets.
- Redesigned Architecture: Graphic user tracking feeds populating trend charts, timing bars, and competitive state peer rank logs.

Digital Marketing Plan: Organic & Community Strategy

Search Optimization Evolution

- Targeting specific purchase-intent keywords like 'join online SSC batch' across product pages.
- Structuring metadata details to display real-time years clearly (e.g., 'Bank Syllabus 2026 update').
- Interlinking information articles with contextual sales blocks to capture interest immediately.

Social Learning Community Network

- YouTube Production: Delivering structured live previous-year problem-solving runs daily.
- Instagram Programming: Launching quick conceptual evaluation quizzes within daily interactive stories.
- Telegram Architecture: Distributing free daily content summary files and enrollment updates instantly.

Digital Marketing Plan: Paid Ads & Conversion Funnels

Targeted Paid Ad Delivery

- Google Search Tracking: Reaching users entering immediate buying terms to bypass broad informational spaces.
- Meta Audience Remarketing: Placing custom code on blog entries to deliver targeted batch coupon ads to social feeds.
- Video Ad Sequencing: Serving comprehensive online class trailers directly to free YouTube viewers.

Automated Lead Pipeline Management

- WhatsApp pipelines dispatch instant verification keys and free introductory booklets right after web signup.
- SMS networks circulate direct notifications for exam deadlines backed by localized application links.
- Email sequences introduce principal subject experts and illustrate doubt clearing workflows step-by-step.

10-Week Implementation Roadmap & SEO Controls

Development Timeline Phases

- Weeks 1-2: Wireframe drafting and layout verification across key physical center cohorts.
- Weeks 3-5: Frontend modular programming and central student analytics integration via React/Next.js.
- Weeks 6-8: Closed beta framework testing deployed exclusively for current classroom students.
- Weeks 9-10: Cross-device responsiveness audit, permanent 301 route mapping, and public system launch.

Search Authority Preservation Mappings

- Unchanged URL Slugs: Existing popular blog pages will maintain their historical address definitions perfectly.
- System Redirect Auditing: Moved submenus will employ direct permanent redirects to shift crawler points cleanly.
- Technical Content Maintenance: Full textual resource lists remain readable so search algorithms verify brand expertise.
